# Windows 365

by Microsoft Corp.

What is it & why should I care?

(Please excuse the layout issues.
A fix is in the works.)

Windows 365 is the Cloud replacement of your Windows desktop, laptop, or tablet PC.

[Image #1 - Diagram of Windows 365 Cloud PC Environment]

Because Windows 365 is
hosted in the Cloud,
it has many advantages over
a stand-alone,
traditional on-site computer.
After looking at these
advantages,
we think you'll agree that it is

a far superior setup compared to the traditional desktop model.

Let's look at these advantages in detail below.

1. First advantage…it looks like your regular Windows screen.

[Image #2 - Screenshot of Windows 365]

So, nothing new to learn.

2. Second advantage…you can access Windows 365

with ANY device that has a web browser.
That's regardless of the make or manufacturer:
Win, Mac, Android, Linux…it doesn't matter.
Desktop, laptop, tablet, or smartphone…
it doesn't matter either!

Let's look at how you access Windows 365
with a web browser. So you go to the website,

select your Cloud PC, and click
Open in browser. That's it.
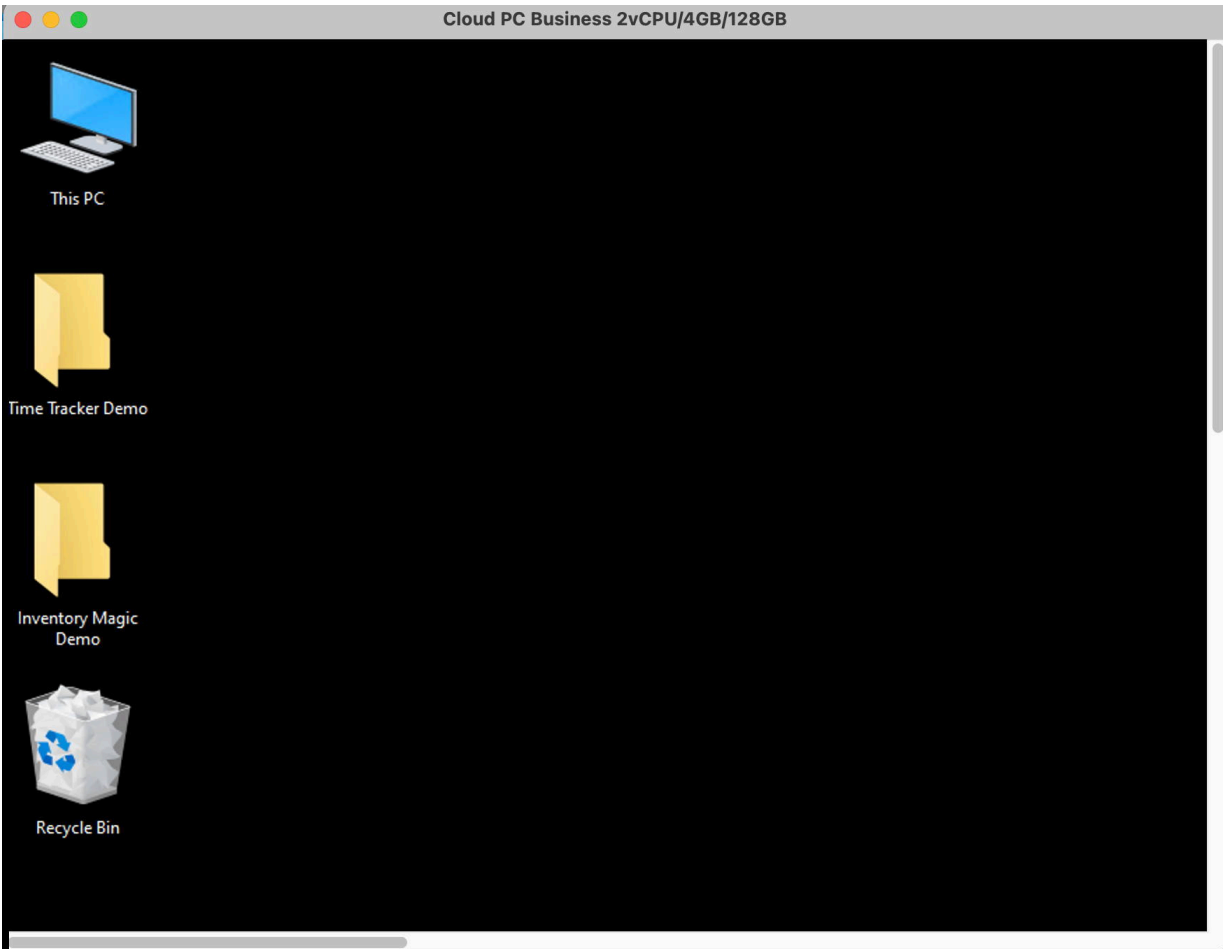

[Image #3 - Screenshot of web browser access]

So, ease of access is a major advantage.
To access your Windows 365 account,
you simply connect with a web browser.

But wait! There's more!
Download the Remote Desktop app,
available on Win, Mac, iOS & Android.

Click on your Cloud PC icon, and you go to your Windows 365 desktop.

[Image #4 - Screenshot of Remote Desktop application]

[Image #5 - Screenshot of Windows 365]

Either way, you have access to your Windows 365 computer. Again, <u>easy access</u>. Anytime. Anywhere.

3. Third Advantage…offsite storage of files. This eliminates several issues at once:

3a. Vandalism & theft.

3b. Severe events - think hurricane, wildfire, etc.

3c. Lost laptop.

3d. Unauthorized access of

sensitive information.

So, another advantage is <u>security</u>.

4. Fourth Advantage…you can configure Windows 365 with different processors, memory and storage. Plus, you can change and tweak these settings AT ANY TIME!

So, another advantage is

peak performance.

4.1 Easily Add or Subtract computers based on changes in need, ie seasonality, increased business, etc.

So another advantage is flexibility.

5. Works for employees who spend time between office, traveling & home. Also, each employee can have a Windows 365 pc configured to their exact needs.

So, another advantage is <u>employee productivity</u>.

6. Less work for systems administrators.

Easier to setup, configure, and keep current.

So, another advantage is lower total <u>cost of ownership</u>.

7. Similar advantages to leasing, without a contract. Cancel anytime. Write off immediately.

So, another advantage is <u>tax savings</u>.

8. Easily keep Windows current.

So, another advantage is <u>computer security</u>.

Price List for Windows 365

Effective Feb. 2022
